90-Day Entry Plan

Install closure before scaling reinvention.

Learn the CEO operating frequency, make executive work legible, prove one AI-native CEO-office mechanism, and earn the right to redesign functions.

Day-90 Outcome

One functioning CEO-office cadence; one decision-ready intelligence layer; one cross-functional priority shipped or explicitly stopped; one functional redesign in measured pilot; and a board-prep path with clear ownership and definitions.

Operating Principles

Observe before simplifying Founder intensity often contains high-value pattern recognition. Separate productive detail from avoidable drag.	Write the contract Every cadence, brief, agent, and initiative needs a purpose, owner, authority boundary, and evidence standard.
Close one loop Proof beats broad transformation theater. Ship one mechanism and one redesign before scaling claims.	Measure honestly Use decision latency, closure, burden, rework, adoption, quality, and reclaimed capacity; label hypotheses until validated.

Days 0-15 | Read the Frequency

- Shadow product reviews, customer calls, leadership sessions, and priority intake.
- Capture what Zeb asks, what changes his mind, what he revisits, and what he personally repairs.
- Map leadership syncs, MBR inputs, quarterly planning, board prep, internal communications, and cross-functional escalations.
- Identify duplicate reporting, missing ownership, stale decisions, and processes that exist only because they always have.
- Baseline decision latency, blocker age, priority closure, briefing burden, rework, and CEO time allocation.

Days 16-30 | CEO Office Minimum Viable System

Daily CEO Brief v1 Decision queue, strategic risk, customer/product signal, cross-functional exceptions, and what changed.	Executive Commit v1 One record for intent, decision, work split, owner, dependencies, finish line, and evidence.
Weekly leadership rhythm Agent-synthesized pre-read; meeting time reserved for decisions, contradiction, and unblock work.	Attention architecture Define what reaches the CEO by push, pull, watch, or silence - and why.

Days 31-45 | Prove the Mechanism

- Select one consequential cross-functional initiative.
- Define human authority and agent-default work.
- Publish owner, due state, blocker path, and evidence.
- Ship, stop, or explicitly reframe.
- Compare preparation time, rework, decisions advanced, repeated questions, and missing context.

Agent / Human Operating Contract

Source gathering, synthesis, reconciliation, monitoring, reminders, drafting, recurring status, dependency detection	Tradeoffs, product judgment, relationship repair, irreversible commitments, people decisions, exception approval	Permissions conflict, evidence is contradictory, consequence crosses threshold, or confidence is insufficient

Days 46-60 | Launch One Functional Redesign

- Choose a value stream with visible friction, willing accountable leadership, recurring work, and measurable consequence.
- Decompose the work: eliminate, agentize, retain for human judgment, or rebuild as a new path.
- Bound permissions, audit logs, human approval, rollback, exception handling, and adoption ownership.
- Measure labor hours avoided, cycle time, rework, quality, adoption, and leader capacity reclaimed.

Days 61-75 | Put Board Prep on Rails

- Establish one narrative owner, source-of-truth definitions, prior-action closure, issue log, review sequence, and dry run.
- Connect AI-era operating claims to product proof, economics, human authority, risk, and measurable workflow change.
- Reconcile CEO, CFO, product, and functional narratives before materials become presentation polish.

Days 76-90 | Publish the Operating Contract

- Codify CEO Brief, Executive Commit, leadership cadence, priority portfolio, and redesign review.
- Report what was eliminated, what agents now own, what humans still own, what shipped, and what remains unproven.
- Choose the next two redesigns based on evidence and leader readiness - not symbolic coverage.

Day-90 Scorecard

Dimension	Day-90 proof	Next decision
CEO leverage	More decision-ready context; reduced avoidable preparation and rework	Expand or refine attention architecture
Execution	One consequential cross-functional priority closed explicitly	Scale Executive Commit
Transformation	One workflow redesign in measured pilot	Standardize, repair, or stop
Leadership	Weekly cadence closes decisions and owners	Address persistent misalignment
Governance	Board definitions, actions, and review path established	Run full board cycle
